

Integrazione tra JSF e Liferay

Overwiev around JSF Integration

Gian Marco Vernile, Software Engineer @ Key-Biz

Perchè trattare questo argomento?!

- ❑ JSF è una tecnologia standard JEE
- ❑ Pienamente compatibile con le Portlet 2.0
- ❑ Abbattimento tempi di startup
- ❑ Knowhow elevato di Javascript , HTML e CSS non richiesto
- ❑ Completa integrazione con i componenti di Liferay

JSF prima scelta per gli sviluppatori

<https://dzone.com/articles/poll-what-java-jvm-frameworks-do-you-use>

JCP

La Java Community Process esiste per lo sviluppo di standard per tecnologie Java

<http://www.jcp.org>

JSF è ...

- un framework per la realizzazione di web app
- basato sul pattern MVC
- Computed Oriented
- Event Driven
- User Interface (UI) Development
- Validazione ed Error Feedback

Liferay Faces: Portal 6.2 Support

- ❑ Liferay Faces GA6 rilasciata l' 11 Agosto 2015
- ❑ Nuova suite Liferay Faces Alloy (per AlloyUI 2.0 / Liferay Portal 6.2)
- ❑ Showcase online :
<http://www.liferayfaces.org/web/guest/showcase>

Liferay Faces : overview

- ❑ Liferay Faces Alloy
alloy:
- ❑ Liferay Faces Bridge
bridge:
portlet:
- ❑ Liferay Faces Portal
portal:

Liferay Faces

Let's go!

New Liferay Plugin Project

Liferay Plugin Project

Create a new project configured as a Liferay plugin

Project name: JSFBootcamp

Display name: JSFBootcamp

Use default location

Location: /Users/GianMarco/Liferay/Environments/Bootcamp/workspace/life

Build type: Ant (liferay-plugins-sdk)

Plugins SDK: liferay-plugins-sdk-6.2

Liferay runtime: Liferay v6.2 CE (Tomcat 7)

Plugin type: Portlet

Include sample code

Launch New Portlet Wizard after project is created

Add project to working set

Working set: More...

< Back Next > Cancel Finish

New Liferay Plugin Project

Liferay Portlet Plugin Project

Choose from available portlet frameworks depending on which technology is most appropriate for this project.

Select portlet framework

- Liferay MVC
Simple and lightweight MVC framework using JSPs that is built-in to Liferay Portal.
- JSF 2.x
Enables development of JSF 2.x applications using Liferay Faces Bridge that run seamlessly inside of Liferay Portal.
- Vaadin
Vaadin is a Java framework for building modern web applications which can be run as portlets inside of Liferay Portal.

Additional portlet options

Portlet name: IntegrationWithJSF

Display name: IntegrationWithJSF

< Back Next > Cancel Finish

New Liferay Plugin Project

Liferay JSF Portlet Plugin Project

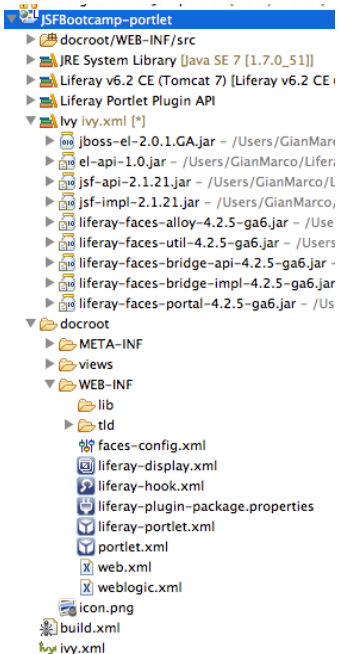

Choose from available JSF component suites

JSF Component Suite

- JSF standard
Standard UI components provided by the JSF runtime
- ICEFaces
Components based in part on YUI and jQuery with automatic Ajax and Ajax Push support
- Liferay Faces Alloy
Components that utilize Liferay's Alloy UI technology based on YUI3
- PrimeFaces
Lightweight, zero-configuration JSF UI framework built on jQuery
- RichFaces
Next-generation JSF component framework by JBoss

< Back Next > Cancel Finish

Si, ma cosa è successo?

```
<?xml version="1.0"?>

</servlet>
```

Liferay Faces Version Scheme

Liferay Faces segue il seguente schema : *Major1.Major2.Minor-Type*

Major1:

- 1 = Portlet 1.0 Bridge for JSF 1.2 (JSR 301) *(Note that Liferay Faces does not support Portlet 1.0)*
- 2 = Portlet 2.0 Bridge for JSF 1.2 (JSR 329)
- 3 = Portlet 2.0 Bridge for JSF 2.1 (JSR TBA)
- 4 = Portlet 2.0 Bridge for JSF 2.2 (JSR TBA)

Major2:

- 0-legacy = Liferay 5.2
- 0 = Liferay 6.0
- 1 = Liferay 6.1
- 2 = Liferay 6.2

Minor:

- May contain bug fixes, improvements, and new features.

Type:

- GA (General Availability)
- RC (Release Candidate)
- BETA (Beta Quality)
- ALPHA (Alpha Quality)

Portlet JSF – configurazione

portlet.xml

```
<portlet>
  <portlet-name>jsf-form</portlet-name>
  <display-name>JSF Form</display-name>
  <portlet-class>javax.portlet.faces.GenericFacesPortlet</portlet-class>
  <init-param>
    <name>javax.portlet.faces.defaultViewId.view</name>
    <value>/views/jsf-form/view.xhtml</value>
  </init-param>
  <expiration-cache>0</expiration-cache>
  <supports>
    <mime-type>text/html</mime-type>
  </supports>
  <portlet-info>
    <title>JSF Form</title>
    <short-title>JSF Form</short-title>
    <keywords>JSF Form</keywords>
  </portlet-info>
  <security-role-ref>
    <role-name>administrator</role-name>
  </security-role-ref>
  <security-role-ref>
    <role-name>guest</role-name>
  </security-role-ref>
  <security-role-ref>
    <role-name>power-user</role-name>
  </security-role-ref>
  <security-role-ref>
    <role-name>user</role-name>
  </security-role-ref>
</portlet>
```

liferay-portlet.xml

```
<portlet>
  <portlet-name>jsf-form</portlet-name>
  <icon>/icon.png</icon>
  <instanceable>true</instanceable>
  <requires-namespaced-parameters>false</requires-namespaced-parameters>
  <ajaxable>false</ajaxable>
  <header-portlet-css>/css/main.css</header-portlet-css>
  <css-class-wrapper>jsf-form</css-class-wrapper>
</portlet>
<portlet>
  <portlet-name>jsf-table</portlet-name>
  <icon>/icon.png</icon>
  <instanceable>true</instanceable>
  <requires-namespaced-parameters>false</requires-namespaced-parameters>
  <ajaxable>false</ajaxable>
  <header-portlet-css>/css/main.css</header-portlet-css>
  <css-class-wrapper>jsf-table</css-class-wrapper>
</portlet>
```

Portlet JSF – simple form

```
<h:form id="id-form">
  <p:growl id="msgs" showDetail="true" />

  <h:panelGrid columns="2" cellpadding="5">
    <p:outputLabel value="Nominativo" for="acnominativo" />
    <p:autoComplete id="acnominativo" value="#{jsfformMangedBean.personaSelectedName}"
      completeMethod="#{jsfformMangedBean.completePersona}" required="true"
    />

    <p:outputLabel value="Evento" for="acevento" />
    <p:autoComplete id="acevento" value="#{jsfformMangedBean.eventoSelectedName}"
      completeMethod="#{jsfformMangedBean.completeEvento}" required="true"
    />

    <p:outputLabel value="Numero Biglietti" for="acbiglietti" />
    <p:inputText type="number" id="acbiglietti" value="#{jsfformMangedBean.numeroBiglietti}"
      required="true"
    />

    <p:commandButton value="Acquista" actionListener="#{jsfformMangedBean.acquista}" oncomplete="updateTable();" />
  </h:panelGrid>
</h:form>

<script type="text/javascript">
  function updateTable(){
    Liferay.fire(
      'updateTable'
    );
  }
</script>
```

Liferay Faces Bridge - IPC

```
<portlet>
  <portlet-name>2</portlet-name>
  <display-name>JSF Table</display-name>
  ...
  <init-param>
    <name>javax.portlet.faces.bridgeEventHandler</name>
    <value>it.keybiz.bootcamp.jsf.bridge.CustomBridgeEventHandler</value>
  </init-param>
  ...
  <supported-processing-event>
    <qname xmlns:x="http://liferay.com/events">x:ipc.updateTicket</qname>
  </supported-processing-event>
</portlet>

<portlet>
  <portlet-name>3</portlet-name>
  <display-name>JSF Update</display-name>
  ...
  <supported-publishing-event>
    <qname xmlns:x="http://liferay.com/events">x:ipc.updateTicket</qname>
  </supported-publishing-event>
</portlet>
...
<event-definition>
  <qname xmlns:x="http://liferay.com/events">x:ipc.updateTicket</qname>
  <value-type>java.lang.String</value-type>
</event-definition>
```

Liferay Faces Bridge - EventHandler

```
QName qName = new QName("http://liferay.com/events", "ipc.updateTicket");
ExternalContext externalContext =
    FacesContext.getCurrentInstance().getExternalContext();
ActionResponse actionResponse = (ActionResponse) externalContext.getResponse();

Map<String, String> params =
    externalContext.getRequestParameterMap();

String idSelected = params.get("idSelected");
actionResponse.setEvent(qName, GetterUtil.getLong(idSelected));
```

```
public class CustomBridgeEventHandler implements BridgeEventHandler{

    @Override
    public EventNavigationResult handleEvent(FacesContext facesContext, Event event) {
        EventNavigationResult eventNavigationResult = null;
        String eventQName = event.getQName().toString();

        if (eventQName.equals("{http://liferay.com/events}ipc.updateTicket")) {
            Serializable value = event.getValue();

            Long selectedId = (Long) value;

            try {
                PersonaEvent personaEvent =
                    PersonaEventLocalServiceUtil.getPersonaEvent(
                        selectedId);

                UpdateManagedBean managedBean = getUpdateManagedBean(facesContext);
                managedBean.setPersonaEventUpdate(personaEvent);

            } catch (PortalException e) {
                e.printStackTrace();
            } catch (SystemException e) {
                e.printStackTrace();
            }

            String fromAction = null;
            String outcome = "ipc.updateTicket";
            eventNavigationResult = new EventNavigationResult(fromAction, outcome);
        }

        return eventNavigationResult;
    }
}
```

Scopes in standard JSF Application

Gli scopes standard sono interpretati diversamente in un portal environment.

JSF Managed Beans hanno scopes definiti nelle specifiche JSF. Le specifiche JSF 1.2 mettono a disposizione 3 scopes:

- **Application**
- **Session**
- **Request**

Con l'introduzione delle specifiche JSF 2.0 sono stati introdotti anche gli scopes **ViewScope** e **PageFlow**

Scopes in Portal Application

In ambiente di portale , proprio per la sua natura, esistono più concetti di scopes rispetto ad una applicazione JSF Standard :

- **Application**
- **Global Session**
- **Portlet Group Session**
- **Portlet Instance Session**
- **Pageflow**
- **View**
- **Portal Aware Request**

To be...

Liferay Faces: Portal 7.0 Support

- Possibilità di deployare una portlet JSF come un OSGi bundle (.jar)
- Liferay Faces Alloy (AlloyUI 3.0)
- Liferay Faces Crystal (Crystal 1.0)
